

Gwich'in Harvest Survey

PCMB Annual Harvest Meeting
February 9, 2021

Presented by Steve Andersen
GRRB Stakeholder Liaison
sandersen@grrb.nt.ca

Survey Overview

The Gwich'in Harvest Survey began in 2008 and collects information on vadzaih (caribou), dinjik (moose), aak'ii (muskox), and divii (Dall's sheep) in the Gwich'in Settlement Area. This presentation looks at Porcupine Caribou harvests during the June 2019 – May 2020 survey period.

FREQUENCY

Surveys are run twice a year and cover the periods of June-Oct and Nov-May.

POPULATION

Results reflect harvesting by Gwich'in participants living within the GSA.

ORGANIZATIONS

RRCs maintain harvester lists and run the local surveys. The GRRB analyzes the data.

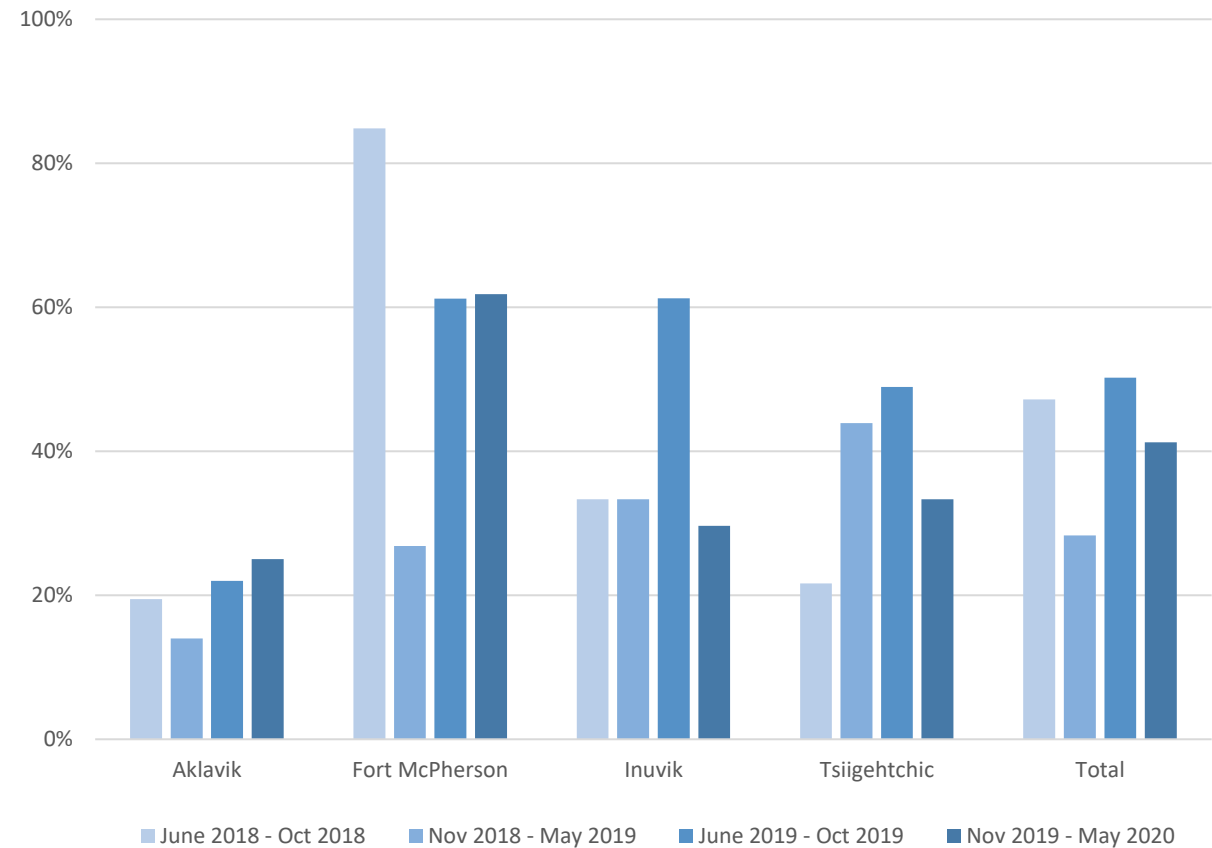

COVID-19

COVID has required a shift from in-person to telephone surveys.

Participation

Over the past four surveys, community participation rates have ranged from 14 - 85%. Total participation has been between 28 - 50% and averaged 42%.

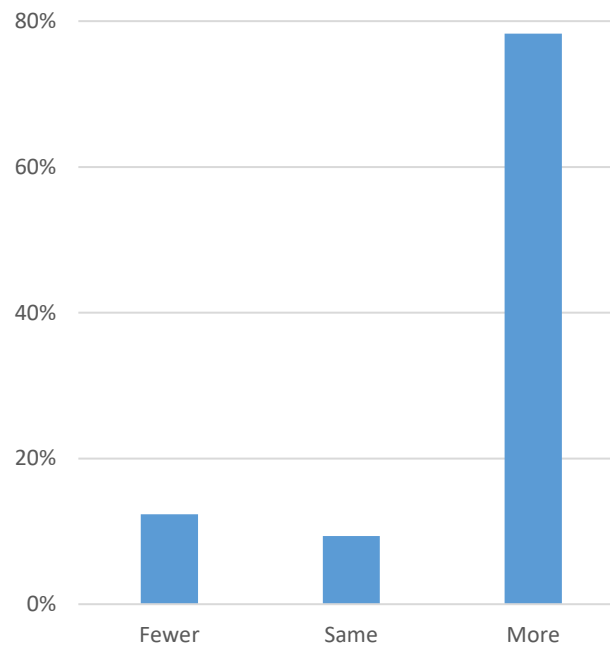

Aklavik has struggled with low participation but preliminary results for the November 2020 survey show their response rate doubling.

Population Trends

Of 203 responses during the June 2019 – May 2020 survey period, 78% of harvesters said they had seen more Porcupine Caribou than during the previous year.

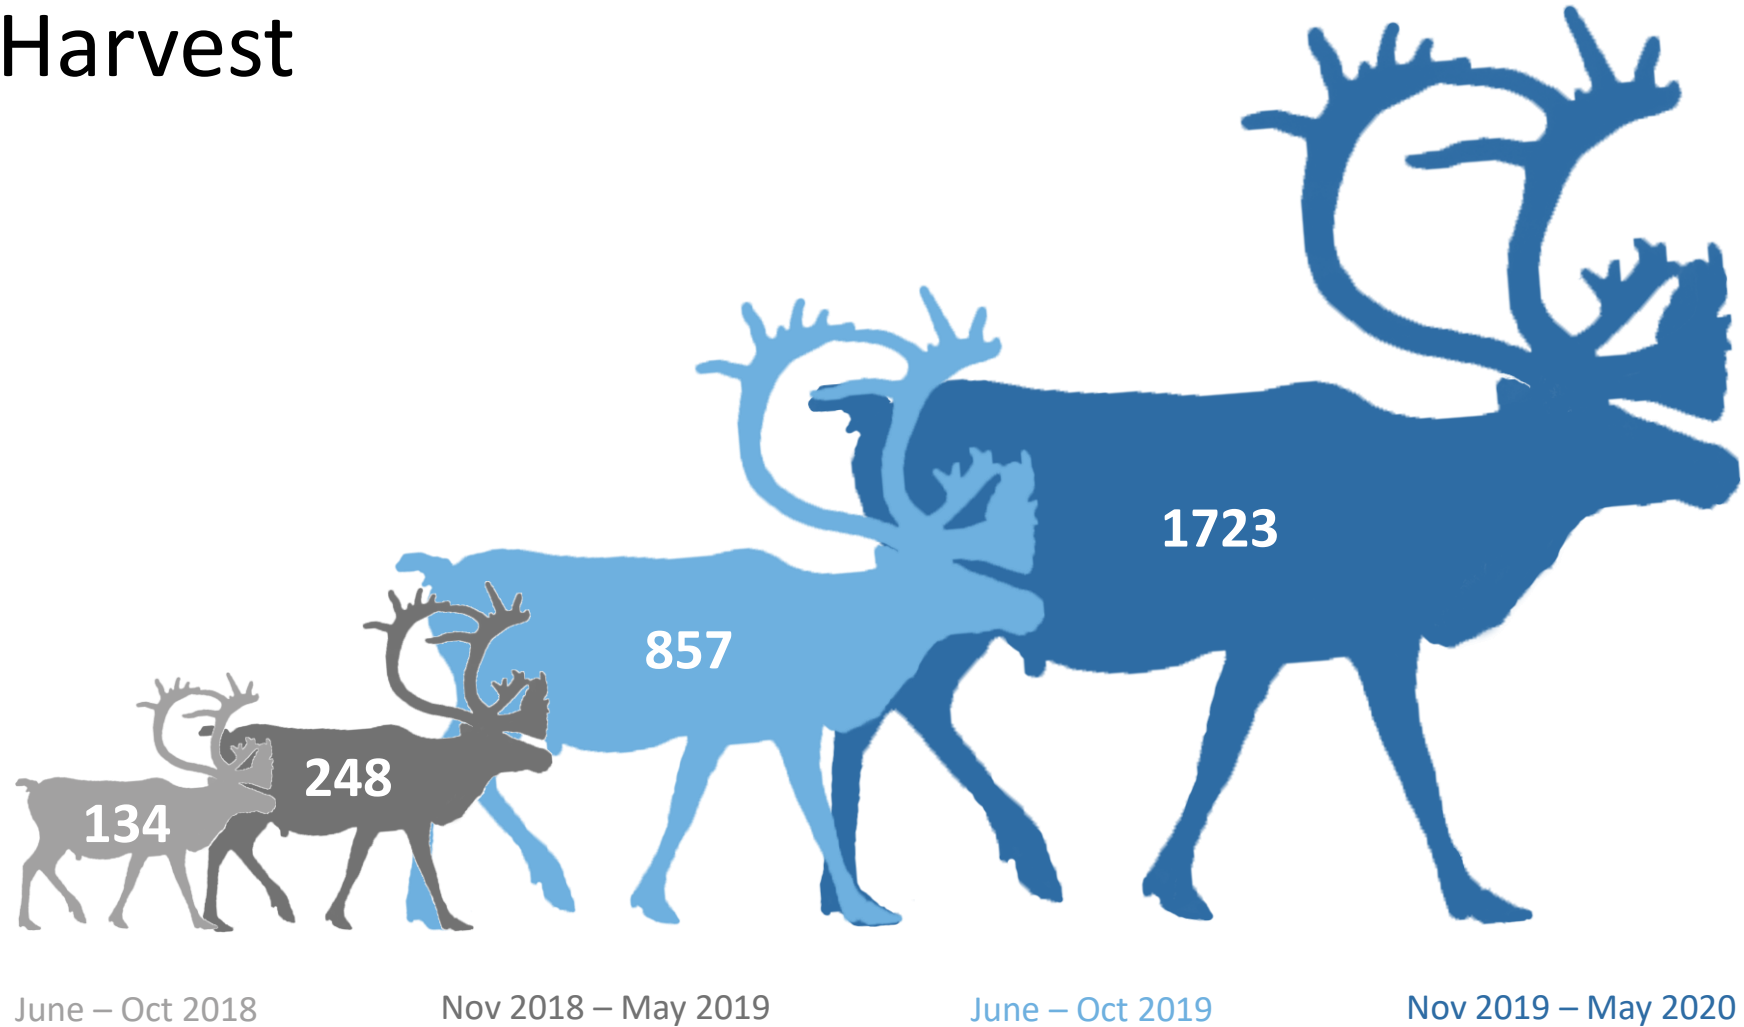

Estimated Total Harvest

June 2019 - May 2020

	Male	Female	Total
Reported	809	467	1276
Estimated	1472	1107	2580
Margin of Error	227	378	441

Gwich'in participants harvested an estimated 2580 ± 441 animals, with a male:female ratio of 1.3. This includes Porcupine Caribou, plus any animals whose herd could not be determined. Animals whose sex was unknown were assumed to be female.

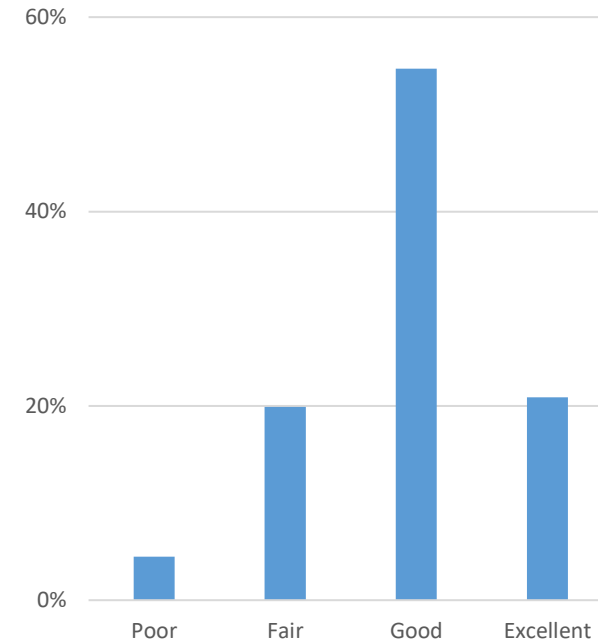

Estimated Total Harvest

Body Condition

Of 201 respondents, 55% said that the body condition of caribou they harvested had been good. Only 4% reported caribou in poor condition.

Observations

LANDSCAPE

There continue to be many comments about landslides and slumping.

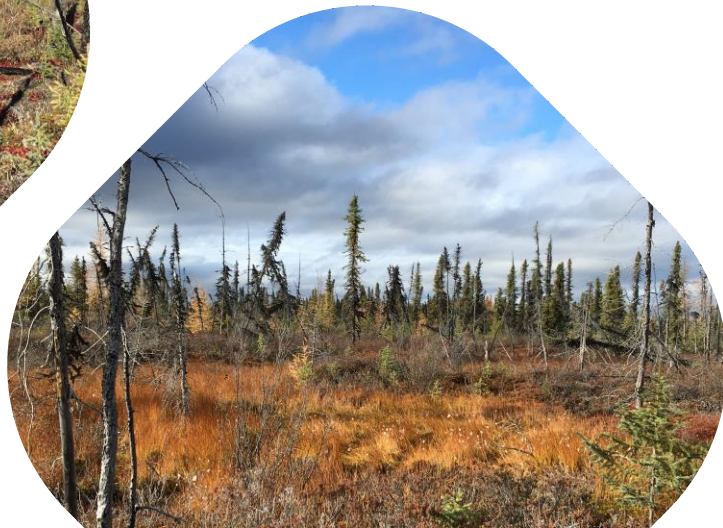

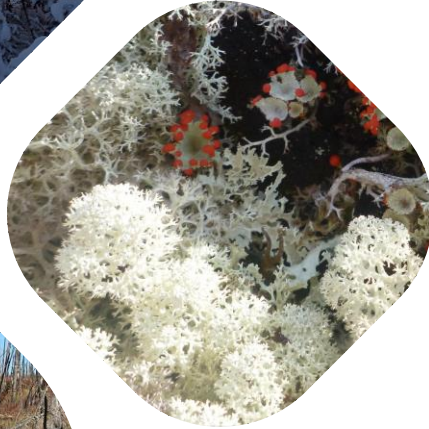

WEATHER

Nov 2019: Observations of abnormally warm weather and a lack of snow.

June 2020: Mixed reports. Several mentions of the weather being strange and difficult to predict.

PEOPLE

Quite a few comments about meat wastage and suggestions that more education is needed.

Future Directions

DATA STORAGE

We currently store our survey data in Excel spreadsheets, which is very limiting. We hope to build a database this year and to begin transferring over our historical data.

SURVEY UPDATES

We have begun working with the RRCs to update our survey questions. Currently, some data is not being used, while other useful information is not collected.

TRAINING

We plan to develop new training materials for our interviewers. They will be rolled out to coincide with the launch of the updated survey.

SHARING RESULTS

We have drafted a brief plain-language summary of the survey results to make them more accessible to the public. We plan to send it to harvesters and the RRCs.

Recommendations

01

ZONE

Maintain the Green Zone designation

02

MANAGEMENT

Promote traditional management practices

03

CONSERVATION

Promote community conservation and education initiatives

Acknowledgements

Thank you to everyone who makes the harvest surveys possible:

- The many **harvesters** who take the time to share their knowledge with us
- Our **interviewers** who collect the data
- The **Renewable Resources Councils** for doing all the local coordination work
- **Environment and Natural Resources** for providing the funding
- The **PCMB** for bringing together stakeholders from all the communities across the herd's range

Acknowledgements
